View Organisation Activity

From the Home screen, select **'Past Activities'** for a snapshot of all saved group activities

Tap on any saved activity for further **Details** about the activity, including the number of Active Points awarded to participants for each activity

Session Duration:

View Organisation Activity

From the Home screen, select **'Statistics'** for a snapshot of all accumulated activities across your organisation as a total, monthly or weekly stat/average

Use this information to set up your own whole school/club competitions and to keep participants motivated!

Tips & Suggestions

- Inform staff by walking through the website in a staff meeting prior to program launch and encourage all staff to download & register as a Deliverer
- Inform students & parents prior to band distribution by sharing the website & videos at whole school assembly and sending home communication as provided in the 'School Communication & Content Schedule' document
- Distribute bands to students several days ahead of intended use to allow parents time to register an account & students time to try the in-app library of activities at home (text)
- Encourage prompt Active Band registration & wearing Active Bands for all school sessions
- Allow extra time in initial session to scan each band in a group & save
- Create & save your favourite activities for one-touch use across multiple groups (text)
- Run a leaderboard, class, level or whole school competition to motivate your students

FAQs

Can I use an iPad to record student activities?

Yes! The iOS Deliverer App (Teachers & Coaches) can be downloaded to an iPad once your school/organisation has been registered and the once bands have been scanned and saved to a group on a mobile device.

iPads are a great device for teachers to instantly & easily allocate points to all students in their class or group. iPads are also a great device for students to view & post their results, and to apply this data to other areas of the curriculum (eg: Numeracy: (Measurement) Data & Graphing, (Number) Operations & Averages, HPE: Health (HR & effects of exercise low/moderate/high intensity activity, Science/Health: human anatomy – muscular-skeletal system, respiratory system).

Can I download both the User App and the Deliverer App (Teachers & Coaches)?

Yes! It's a great idea to download both the User App, so that you can see every screen that your students see when they use the bands at home, as well as downloading the Deliverer App in order to create and apply school groups to activities. The User app also provides an activity library of 150+ activity ideas for teachers & parents & students to try. Teachers can use this activity library as a resource for level sport or Brain Break activities. If they find one they like, they can then create it in the 'Custom Activity' section of the Deliverer app for one-touch use.

Do the bands when connected to the app, provide any kind of GPS or location services with the app?

The bands themselves are passive. They have an NFC chip with a unique identifier, but the bands themselves don't contain or record any data or personal information. They also don't have any GPS or location functionality.

FAQs (Continued)

What safety precautions does the app/servers provide in terms of protecting from data breaches?

We take our responsibility and requirement to protect user data seriously. We have high grade security features and monitoring built into the platform to monitor platform activity and actively work to protect unauthorised data access. This includes 2 factor authentication for admin users and features like preventing users from creating an account with a password that has previously appeared in any data leak from other platforms and services.

Do the bands need to be registered for them to work? Can you just use them anonymously?

Yes, the bands only work in terms of helping to record any activity for a user when a user has activated a band. The unique identifier in the band (essentially a series of numbers that is written to the NFC chip) needs to be connected to a profile. The band essentially acts as a "key" that allows activity to be tagged and recorded to a unique user.

Where is the data being stored that is collected when signing up to the apps that are part of Weet-Bix Active Bands? Is the data stored in Australia or off-shore somewhere?

All WAB data is hosted in Amazon Web Services EC2 Sydney region.
